

FRASTE PL.G

Griffiths Drilling has recently purchased a new addition to their fleet of drill rigs - a 2014 Fraste PL.G. This compact geotechnical drill rig is agile and powerful. Ideal for inner city work, and jobs where space is limited.

It is possible to reduce the width of the rig down to one metre wide. The rig is remote control and has a full safety cage, an automatic SPT hammer, and automatic breakout for the drill rods. It has the capability to drill PQ, HQ, Rotary mud, concentrix drilling, down hole hammer and auger. This rig is small and will be ideal for very tight sites, footpath work, or inside buildings. The rig weighs only 3.5T, with the ability to use a lifting cradle to move it into hard to access sites by crane or helicopter.

Dimensions

- Width: 1m – 1.4m (adjustable)
- Length: 4.3m with mast down
- Height: 4.3m
- Weight: 3500kg
